DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1,5-10 and 15, drawn to a method and kit for detecting acetyltransferase activity in a peptide, classified in class 435, subclass 7.1.
 - II. Claims 2,5-10 and 15, drawn to a method and kit for screening a compound that inhibits or enhances the activity of acetyltransferase, classified in class 436 ; subclass 501 .
 - III. Claims 3,5-10 and 15 drawn to a method and kit for detecting the deacetylase activity in a peptide, classified in class 436 subclass 513 .
 - IV. Claims 4-10 and 15 a method and kit of screening a compound that inhibits or enhances deacetylase activity peptide, classified in class 436, subclass 528.
 - V. Claim 11, drawn to a method for screening a compound that inhibits the deacetylase activity or a compound that enhances the activity or expression of acetyltransferase , classified in class 436, subclass 519.
 - VI. Claim 12 a method for screening a compound that inhibits the deacetylase activity of histone, classified in class 436, subclass 63.
 - VII. Claims 13&14, drawn to a natural isolable compound , classified in class 252, subclass 700.

Art Unit: 1641

2. Inventions I - VII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are methods for detection. Group I is a method for detecting acetyltransferase activity comprising a peptide substrate, group II is a method for screening a compound that inhibits or enhances the activity of acetyltransferase comprising test compound and a peptide substrate, group III is a method for detecting deacetylase activity in a test peptide comprising an acetylated peptide substrate. Group IV is a method for screening a compound that inhibits or enhances the deacetylase activity comprising contacting an acetylated peptide substrate and a test compound, group V is a screening method comprising immobilized cultured cells, and group VI is a screening method comprising cultured cells carrying a vector comprising a promoter that functions within the cell, and group VII is a natural isolable compound. The different inventions have a different mode of operation, different function and different effect from each other and therefore are patentably distinct.

3. Because these inventions are distinct for the reasons given above and the search required for one Group is not required for another Group, and have acquired a separate status in the art as shown by their different classifications, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. A telephone call was made to Mr. Peter Corless on February 13 2001 to request an oral election to the above restriction requirement, but did not result in an election being made.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
